

Introduction to the clinic and foundations of evidence-based medicine:

1. What is a symptom?

- A. An objective clinical finding
- B. A laboratory result
- C. A subjective complaint experienced by the patient
- D. A radiological image

2. Which of the following is a sign?

- A. Headache
- B. Nausea
- C. Fatigue
- D. Fever

3. Which of the following is considered a symptom?

- A. Hypertension
- B. Chest pain
- C. Tachycardia
- D. Cyanosis

4. A syndrome is:

- A. A laboratory test
- B. A single symptom
- C. A group of signs and symptoms occurring together
- D. A surgical procedure

5. Which of the following is objective?

- A. Dizziness
- B. Pain
- C. Rash
- D. Weakness

6. Which statement best describes a symptom?

- A. Measured by the physician
- B. Seen on examination
- C. Reported by the patient
- D. Always visible

7. Clinical reasoning helps physicians to:

- A. Avoid history taking
- B. Memorize textbooks only

- C. Analyze information and make decisions
- D. Ignore investigations

8. The first step in clinical reasoning is usually:

- A. Surgery
- B. Treatment
- C. History taking
- D. Rehabilitation

9. Which of the following is a syndrome?

- A. Fever
- B. Pain
- C. Metabolic syndrome
- D. Cough

10. Which of the following is a sign?

- A. Vomiting sensation
- B. Elevated blood pressure
- C. Dizziness
- D. Fatigue

11. Which process involves generating differential diagnoses?

- A. Infection control
- B. Clinical reasoning
- C. Sterilization
- D. Randomization

12. A patient complains of nausea. This is:

- A. A sign
- B. A syndrome
- C. A symptom
- D. A diagnosis

13. Swelling detected during examination is:

- A. A symptom
- B. A sign
- C. A syndrome
- D. A bias

14. Which is subjective?

- A. Tachycardia
- B. Fever
- C. Pain
- D. Cyanosis

15. The term "differential diagnosis" means:

- A. Final confirmed diagnosis
- B. List of possible diagnoses
- C. Surgical treatment plan
- D. Laboratory protocol

16. Which of the following best describes a syndrome?

- A. A medical instrument
- B. Combination of related findings
- C. A blood test
- D. A medication

17. An example of a sign is:

- A. Fatigue
- B. Dizziness
- C. Jaundice
- D. Nausea

18. An example of a symptom is:

- A. Rash
- B. Cyanosis
- C. Headache
- D. Edema

19. Clinical reasoning is important because it:

- A. Replaces communication
- B. Improves diagnostic accuracy
- C. Eliminates uncertainty completely
- D. Prevents all disease

20. A clinician observing tachycardia is identifying:

- A. A symptom
- B. A sign
- C. A syndrome
- D. A bias

21. Asepsis means:

- A. Surgical removal of tissue
- B. Prevention of contamination by microorganisms
- C. Drug resistance
- D. Vaccination only

22. Antisepsis refers to:

- A. Radiological examination
- B. Use of chemicals to destroy microorganisms on living tissue

- C. Genetic testing
- D. Antibiotic resistance

23. Which is an antiseptic?

- A. Saline
- B. Glucose
- C. Chlorhexidine
- D. Distilled water

24. Medical asepsis aims to:

- A. Eliminate all microorganisms completely
- B. Reduce the number of microorganisms
- C. Increase contamination
- D. Replace surgery

25. Surgical asepsis requires:

- A. No hand washing
- B. Sterile technique
- C. Social distancing only
- D. Exercise

26. The most effective measure to prevent healthcare-associated infections is:

- A. Exercise
- B. Diet
- C. Hand hygiene
- D. X-ray

27. Which route of infection transmission involves coughing and sneezing?

- A. Bloodborne
- B. Droplet transmission
- C. Vector-borne
- D. Genetic transmission

28. Airborne infections spread through:

- A. Direct touch only
- B. Food only
- C. Small particles suspended in air
- D. Urine only

29. Which is part of personal protective equipment?

- A. Television
- B. Gloves
- C. Bed sheets
- D. Notebook

30. The WHO "Five Moments" are related to:

- A. Nutrition
- B. Surgery
- C. Hand hygiene
- D. Rehabilitation

31. Hand hygiene should be performed:

- A. Only after touching patients
- B. Only before surgery
- C. Before and after patient contact
- D. Once daily

32. Which of the following helps prevent infection transmission?

- A. Poor sterilization
- B. Vaccination
- C. Ignoring symptoms
- D. Shared needles

33. Direct contact transmission occurs through:

- A. Air only
- B. Physical contact
- C. Food only
- D. Genetics

34. Sterilization means:

- A. Reducing microorganisms partially
- B. Complete destruction of microorganisms
- C. Cleaning floors only
- D. Hand massage

35. A contaminated needle may spread:

- A. Airborne infection only
- B. Bloodborne infection
- C. Genetic disease
- D. Nutritional deficiency

36. Which practice is essential before aseptic procedures?

- A. Smoking
- B. Hand disinfection
- C. Sleeping
- D. Watching videos

37. Isolation precautions are used to:

- A. Increase infection spread
- B. Prevent transmission of infection

- C. Replace treatment
- D. Improve appetite

38. Which microorganism control method is used on living tissues?

- A. Sterilization
- B. Antisepsis
- C. Radiation only
- D. Freezing

39. Healthcare-associated infections are also called:

- A. Community injuries
- B. Nosocomial infections
- C. Genetic disorders
- D. Autoimmune diseases

40. Safe disposal of sharps helps prevent:

- A. Hypertension
- B. Needlestick injuries
- C. Asthma
- D. Arthritis

41. EBM stands for:

- A. Emergency Biological Management
- B. Ethical Biomedical Medicine
- C. Evidence-Based Medicine
- D. Experimental Basic Methods

42. Evidence-Based Medicine combines:

- A. Tradition and intuition only
- B. Scientific evidence, clinical expertise, and patient values
- C. Religion and policy
- D. Opinion and advertising

43. Clinical expertise refers to:

- A. Laboratory equipment
- B. Physician knowledge and experience
- C. Hospital architecture
- D. Computer software only

44. Patient values are important because:

- A. Patients should not participate
- B. Treatment decisions should consider patient preferences
- C. Only doctors decide
- D. Guidelines replace communication

45. Which source usually contains original research?

- A. Novel
- B. Newspaper
- C. Scientific journal
- D. Advertisement

46. Which database is commonly used for medical literature?

- A. Netflix
- B. Instagram
- C. PubMed
- D. Spotify

47. Clinical guidelines are:

- A. Random opinions
- B. Recommendations based on evidence
- C. Fictional stories
- D. Political laws

48. Peer review means:

- A. Review by patients
- B. Review by journalists
- C. Evaluation by experts before publication
- D. Review by advertisers

49. A predatory journal usually:

- A. Has strict quality control
- B. Publishes low-quality research for profit
- C. Is government-owned
- D. Publishes textbooks only

50. Which is considered the highest level of evidence?

- A. Expert opinion
- B. Case report
- C. Systematic review and meta-analysis
- D. Editorial

51. Randomized controlled trials are important because they:

- A. Eliminate all disease
- B. Reduce bias
- C. Replace clinical expertise
- D. Avoid statistics

52. A meta-analysis:

- A. Reports one patient case
- B. Combines data from multiple studies

- C. Is personal opinion
- D. Avoids statistics

53. Systematic reviews aim to:

- A. Ignore evidence
- B. Summarize all relevant studies systematically
- C. Publish advertisements
- D. Replace guidelines

54. Which is the weakest level of evidence?

- A. Meta-analysis
- B. Randomized trial
- C. Expert opinion
- D. Cohort study

55. External validity refers to:

- A. Accuracy within the study only
- B. Generalizability of results
- C. Sample size only
- D. Cost of research

56. Internal validity refers to:

- A. Advertising quality
- B. How well the study avoids bias
- C. Social popularity
- D. Publication speed

57. Which source is generally most reliable?

- A. Anonymous blog
- B. Social media comment
- C. Peer-reviewed journal
- D. Celebrity interview

58. Evidence-based practice improves:

- A. Bias only
- B. Patient outcomes
- C. Advertising revenue
- D. Hospital size

59. Which of the following is NOT a component of EBM?

- A. Clinical expertise
- B. Patient values
- C. Scientific evidence
- D. Astrology

60. Which statement about EBM is correct?

- A. It ignores patient preferences
- B. It integrates evidence with clinical judgment
- C. It replaces physicians
- D. It avoids research

61. Scientific evidence is generally more reliable than:

- A. Clinical trials
- B. Systematic reviews
- C. Personal opinion
- D. Cohort studies

62. A scientific argument should be based on:

- A. Emotions only
- B. Data and evidence
- C. Rumors
- D. Advertising

63. Authority alone does not guarantee:

- A. Experience
- B. Scientific accuracy
- C. Education
- D. Employment

64. Personal beliefs may:

- A. Always be scientifically correct
- B. Lack supporting evidence
- C. Replace research
- D. Be equal to trials

65. Evidence-based conclusions require:

- A. Popularity only
- B. Research support
- C. Social media approval
- D. Tradition alone

66. Which is more objective?

- A. Rumor
- B. Opinion
- C. Scientific evidence
- D. Personal belief

67. Research differs from opinion because research:

- A. Avoids data
- B. Uses systematic methods

- C. Depends on emotions
- D. Ignores analysis

68. Which is an example of authority-based thinking?

- A. Reviewing trial data
- B. Accepting a claim only because an expert said it
- C. Comparing studies
- D. Conducting analysis

69. Scientific conclusions should be:

- A. Unquestionable forever
- B. Open to testing and revision
- C. Based only on tradition
- D. Emotional

70. The strongest medical recommendations are usually based on:

- A. Celebrity advice
- B. High-quality evidence
- C. Personal stories
- D. Rumors

71. Observational studies involve:

- A. Active intervention by researchers
- B. Observation without intervention
- C. Surgery only
- D. Vaccination only

72. A cross-sectional study examines:

- A. Patients over decades
- B. A population at one point in time
- C. One patient only
- D. Animal experiments only

73. A cohort study usually:

- A. Compares past exposure only
- B. Follows groups over time
- C. Uses no participants
- D. Avoids outcomes

74. Case-control studies compare:

- A. Two hospitals
- B. People with and without disease
- C. Two medications only
- D. Surgical instruments

75. Clinical trials are examples of:

- A. Observational studies
- B. Experimental studies
- C. Editorials
- D. Case reports

76. Randomization helps to:

- A. Increase bias
- B. Reduce selection bias
- C. Avoid patients
- D. Eliminate statistics

77. Which study design is strongest for determining causation?

- A. Case report
- B. Cross-sectional study
- C. Randomized controlled trial
- D. Expert opinion

78. Case reports are useful for:

- A. Large population analysis
- B. Describing rare conditions
- C. Proving causation strongly
- D. National statistics

79. A case series includes:

- A. One patient only
- B. Several similar patient cases
- C. No clinical data
- D. Animal research only

80. One limitation of case reports is:

- A. They are expensive
- B. They cannot establish causation
- C. They require randomization
- D. They use excessive statistics

81. Study design matters because it affects:

- A. Building architecture
- B. Quality of evidence
- C. Physician salary
- D. Hospital food

82. Bias in research can:

- A. Improve accuracy
- B. Distort results

- C. Eliminate confounding
- D. Increase validity

83. Which study design is best for studying incidence over time?

- A. Case report
- B. Cohort study
- C. Editorial
- D. Laboratory note

84. Cross-sectional studies are useful for measuring:

- A. Long-term outcomes only
- B. Prevalence
- C. Genetic mutations only
- D. Survival rates only

85. Case-control studies are especially useful for:

- A. Rare diseases
- B. Investigating risk factors
- C. Measuring prevalence only
- D. Animal anatomy

86. Experimental studies involve:

- A. Observation only
- B. Researcher intervention
- C. No participants
- D. Opinion surveys only

87. A control group is used to:

- A. Increase confounding
- B. Provide comparison
- C. Eliminate all bias
- D. Avoid analysis

88. Blinding in studies helps reduce:

- A. Sample size
- B. Bias
- C. Funding
- D. Population size

89. Prospective studies collect data:

- A. From the future moving forward
- B. Forward over time
- C. Backward only
- D. Without participants

90. Retrospective studies analyze:

- A. Future events only
- B. Past data
- C. Animal behavior only
- D. Surgical tools

91. A research question is:

- A. A diagnosis
- B. A specific problem the study aims to answer
- C. A treatment protocol
- D. A laboratory machine

92. A good research question should be:

- A. Vague
- B. Clear and focused
- C. Impossible to answer
- D. Emotional

93. PICO is used to:

- A. Sterilize equipment
- B. Formulate clinical research questions
- C. Diagnose infections
- D. Publish textbooks

94. In PICO, "P" stands for:

- A. Prevention
- B. Patient or population
- C. Probability
- D. Publication

95. In PICO, "I" stands for:

- A. Intervention
- B. Infection
- C. Incidence
- D. Information

96. In PICO, "C" stands for:

- A. Cancer
- B. Case report
- C. Comparison
- D. Conclusion

97. In PICO, "O" stands for:

- A. Observation only
- B. Outcome

- C. Opinion
- D. Organization

98. A focused research question helps:

- A. Increase confusion
- B. Guide study design
- C. Eliminate ethics
- D. Avoid analysis

99. Which is a characteristic of a good research question?

- A. Ambiguous
- B. Relevant
- C. Unanswerable
- D. Emotional

100. The PICO model is commonly used in:

- A. Architecture
- B. Evidence-based medicine
- C. Agriculture
- D. Astronomy

101. A population is:

- A. One participant only
- B. The entire group of interest
- C. A hospital building
- D. A research journal

102. A sample is:

- A. A subset of the population
- B. The entire world
- C. A diagnosis
- D. A laboratory method

103. Sampling is necessary because:

- A. Studying everyone is often impractical
- B. Research resources are limited
- C. Populations are too large
- D. All of the above

104. A representative sample should:

- A. Be biased
- B. Reflect the population accurately
- C. Exclude participants randomly
- D. Ignore demographics

105. **Large sample sizes generally:**
- A. Increase random error
 - B. **Improve reliability**
 - C. Eliminate ethics
 - D. Prevent publication
106. **Selection bias occurs when:**
- A. **The sample does not represent the population**
 - B. Participants are randomized
 - C. Data are analyzed correctly
 - D. Results are replicated
107. **Random sampling helps:**
- A. Increase bias
 - B. **Improve representativeness**
 - C. Eliminate all confounding
 - D. Avoid participants
108. **Which term refers to all patients with a disease of interest?**
- A. Sample
 - B. **Population**
 - C. Variable
 - D. Bias
109. **A small sample size may lead to:**
- A. Greater precision
 - B. **Less reliable results**
 - C. Perfect validity
 - D. Elimination of error
110. **Sampling allows researchers to:**
- A. Avoid statistics
 - B. **Study populations more efficiently**
 - C. Eliminate ethics review
 - D. Ignore methodology
111. **Quantitative data are:**
- A. Descriptive words only
 - B. **Numerical measurements**
 - C. Emotional opinions only
 - D. Historical stories
112. **Qualitative data are:**
- A. Always numerical
 - B. **Descriptive and non-numerical**

- C. Laboratory values only
 - D. Statistical formulas
113. **Blood pressure is an example of:**
- A. Qualitative data
 - B. Quantitative data
 - C. Narrative data
 - D. Subjective data only
114. **Patient interview themes are examples of:**
- A. Qualitative data
 - B. Quantitative variables
 - C. Numerical values only
 - D. Laboratory findings only
115. **Quantitative research often uses:**
- A. Stories only
 - B. Statistics
 - C. Poetry
 - D. Paintings
116. **Qualitative research is useful for exploring:**
- A. Numerical trends only
 - B. Experiences and perceptions
 - C. Blood glucose only
 - D. Surgical tools
117. **Age measured in years is:**
- A. Qualitative
 - B. Quantitative
 - C. Narrative
 - D. Subjective only
118. **Patient satisfaction interviews are commonly:**
- A. Quantitative only
 - B. Qualitative
 - C. Genetic
 - D. Experimental only
119. **Which type of data is best for statistical calculations?**
- A. Qualitative
 - B. Quantitative
 - C. Narrative
 - D. Opinion-based

120. **Qualitative studies often use:**
- A. Randomization only
 - B. Interviews and observations
 - C. Laboratory machines only
 - D. Surgical procedures
121. **The title of a scientific article should:**
- A. Be unrelated to content
 - B. Reflect the topic of the study
 - C. Avoid important details
 - D. Contain jokes
122. **The abstract provides:**
- A. Full raw data only
 - B. Brief summary of the study
 - C. Advertising
 - D. Author biography
123. **The introduction section explains:**
- A. Statistical calculations only
 - B. Background and purpose of the study
 - C. Financial cost only
 - D. Patient discharge plans
124. **The methods section describes:**
- A. Opinions only
 - B. How the study was conducted
 - C. Future diseases
 - D. Advertising strategy
125. **The results section presents:**
- A. Personal beliefs
 - B. Study findings and data
 - C. Emotional reactions
 - D. Editorial comments only
126. **The discussion section usually:**
- A. Lists references only
 - B. Interprets the results
 - C. Contains no analysis
 - D. Repeats the title only
127. **The conclusion section summarizes:**
- A. Random opinions
 - B. Main findings and implications

- C. Patient names
 - D. Hospital rules
128. **References in articles are important because they:**
- A. Increase confusion
 - B. **Support scientific credibility**
 - C. Replace data
 - D. Eliminate bias
129. **The methods section is important for assessing:**
- A. Author popularity
 - B. **Study validity**
 - C. Social media reach
 - D. Hospital income
130. **Which section usually contains statistical outcomes?**
- A. Introduction
 - B. **Results**
 - C. References
 - D. Title
131. **Statistics in medicine are used to:**
- A. Increase confusion
 - B. **Analyze and interpret data**
 - C. Replace research
 - D. Avoid calculations
132. **Statistical significance helps determine whether:**
- A. Results are likely due to chance
 - B. **Findings are unlikely due to chance**
 - C. Authors are famous
 - D. Patients are satisfied
133. **Association means:**
- A. One factor definitely causes another
 - B. **Two variables are related**
 - C. No relationship exists
 - D. Results are false
134. **Causation means:**
- A. Coincidence only
 - B. **One factor directly influences another**
 - C. No effect exists
 - D. Random variation only

135. **An association does not always mean:**
- A. Data exist
 - B. Causation
 - C. Variables relate
 - D. Research occurred
136. **Confounding occurs when:**
- A. Another factor influences the relationship studied
 - B. Data are perfectly accurate
 - C. Bias is impossible
 - D. Randomization always succeeds
137. **Publication bias refers to:**
- A. Publishing only negative studies
 - B. Preference for publishing positive findings
 - C. Avoiding journals
 - D. Excessive sample size
138. **A small sample size may increase:**
- A. Precision only
 - B. Random error
 - C. External validity only
 - D. Funding
139. **Bias can affect:**
- A. Study accuracy
 - B. Results interpretation
 - C. Validity
 - D. All of the above
140. **Which factor can reduce reliability of study results?**
- A. Adequate sample size
 - B. Proper randomization
 - C. Confounding variables
 - D. Clear methodology
141. **Applying research evidence to patients requires:**
- A. Ignoring patient preferences
 - B. Clinical judgment and individualization
 - C. Avoiding communication
 - D. Following studies blindly
142. **Individualization of care means:**
- A. Same treatment for everyone
 - B. Adapting treatment to each patient

- C. Ignoring evidence
 - D. Avoiding guidelines
- 143. Ethical considerations in research include:**
- A. Patient safety
 - B. Informed consent
 - C. Confidentiality
 - D. All of the above
- 144. Informed consent means:**
- A. Patients are forced into studies
 - B. Patients voluntarily agree after receiving information
 - C. Researchers decide everything
 - D. Consent is unnecessary
- 145. Clinical decisions should consider:**
- A. Evidence only
 - B. Physician opinion only
 - C. Evidence, expertise, and patient preferences
 - D. Advertising only
- 146. Research evidence may not apply equally to all patients because of:**
- A. Individual differences
 - B. Comorbidities
 - C. Patient preferences
 - D. All of the above
- 147. Confidentiality in medicine means:**
- A. Sharing patient data publicly
 - B. Protecting patient information
 - C. Ignoring ethics
 - D. Publishing all records online
- 148. Ethics committees help ensure:**
- A. Increased bias
 - B. Protection of research participants
 - C. Faster advertising
 - D. Reduced validity
- 149. Clinical guidelines should be:**
- A. Followed blindly in every situation
 - B. Adapted to individual patient needs
 - C. Ignored completely
 - D. Used only in research

150. **Good clinical decision-making requires:**
- A. Scientific evidence
 - B. Clinical expertise
 - C. Patient-centered care
 - D. All of the above
151. **Which study design is observational?**
- A. Randomized trial
 - B. Cohort study
 - C. Experimental intervention
 - D. Clinical trial
152. **Which evidence source is strongest?**
- A. Expert opinion
 - B. Case report
 - C. Meta-analysis
 - D. Editorial
153. **Pain reported by the patient is:**
- A. Sign
 - B. Symptom
 - C. Syndrome
 - D. Bias
154. **The purpose of hand hygiene is to:**
- A. Increase contamination
 - B. Prevent infection transmission
 - C. Replace antibiotics
 - D. Eliminate all disease
155. **Which study design follows participants over time?**
- A. Cross-sectional
 - B. Cohort
 - C. Case report
 - D. Editorial
156. **Randomization mainly reduces:**
- A. Sample size
 - B. Selection bias
 - C. Cost
 - D. Publication bias
157. **A peer-reviewed publication is reviewed by:**
- A. Politicians
 - B. Patients

- C. Experts in the field
 - D. Journalists only
158. Which is NOT a reliable medical source?
- A. PubMed
 - B. Clinical guideline
 - C. Anonymous blog
 - D. Scientific journal
159. Case reports are most useful for:
- A. Proving treatment efficacy strongly
 - B. Describing unusual cases
 - C. Large population analysis
 - D. Meta-analysis
160. Which term refers to applicability of findings to other populations?
- A. Internal validity
 - B. External validity
 - C. Bias
 - D. Confounding
161. An objective finding is called:
- A. Symptom
 - B. Sign
 - C. Syndrome
 - D. Variable
162. Which section of an article explains how research was performed?
- A. Discussion
 - B. Results
 - C. Methods
 - D. Conclusion
163. Which level of evidence is strongest for treatment recommendations?
- A. Expert opinion
 - B. Case series
 - C. Systematic review
 - D. Personal belief
164. The best definition of bias is:
- A. Perfect accuracy
 - B. Systematic error affecting study results
 - C. Large sample size
 - D. Statistical significance

165. **A randomized controlled trial is:**
- A. Observational
 - B. **Experimental**
 - C. Narrative
 - D. Descriptive only
166. **Which is a qualitative research method?**
- A. Blood pressure measurement
 - B. **Patient interview**
 - C. Blood glucose analysis
 - D. Weight calculation
167. **Which is an example of quantitative data?**
- A. Feelings
 - B. Experiences
 - C. **Heart rate**
 - D. Opinions
168. **A confounding factor:**
- A. Clarifies relationships perfectly
 - B. **Distorts observed relationships**
 - C. Removes bias
 - D. Increases randomization
169. **The conclusion of a scientific paper usually:**
- A. Introduces background
 - B. **Summarizes key findings**
 - C. Lists equipment only
 - D. Contains no interpretation
170. **Which of the following is part of EBM?**
- A. Social popularity
 - B. **Best available evidence**
 - C. Advertising campaigns
 - D. Political ideology
171. **The "O" in PICO refers to:**
- A. Observation
 - B. **Outcome**
 - C. Organization
 - D. Opinion
172. **A sample should ideally be:**
- A. Biased
 - B. **Representative**

- C. Randomly inaccurate
 - D. Extremely small
173. **Publication bias may cause:**
- A. Overrepresentation of positive findings
 - B. Distorted scientific literature
 - C. Misleading conclusions
 - D. All of the above
174. **The hierarchy of evidence ranks studies according to:**
- A. Publication date only
 - B. Strength and reliability of evidence
 - C. Journal size only
 - D. Author fame
175. **Ethical research requires:**
- A. Informed consent
 - B. Confidentiality
 - C. Patient protection
 - D. All of the above
176. **Which study type is best for measuring prevalence?**
- A. Cohort
 - B. Case-control
 - C. Cross-sectional
 - D. Meta-analysis
177. **Which study type compares exposed and non-exposed groups over time?**
- A. Cross-sectional
 - B. Cohort study
 - C. Case report
 - D. Editorial
178. **The discussion section mainly:**
- A. Lists patient names
 - B. Interprets findings
 - C. Describes funding only
 - D. Repeats methods exactly
179. **Evidence-based medicine improves:**
- A. Decision-making quality
 - B. Patient care
 - C. Treatment effectiveness
 - D. All of the above

180. Which is a limitation of observational studies?
- A. Possible confounding
 - B. Limited causation assessment
 - C. Bias risk
 - D. All of the above
181. Which route of transmission involves contaminated objects?
- A. Direct contact
 - B. Indirect contact
 - C. Airborne only
 - D. Genetic
182. A scientific article abstract should be:
- A. Extremely long
 - B. Concise summary
 - C. Unrelated to results
 - D. Emotional
183. A sign can usually be:
- A. Felt only by the patient
 - B. Observed or measured
 - C. Imagined
 - D. Emotional
184. The main goal of sterilization is:
- A. Reduce microorganisms partially
 - B. Destroy all microorganisms
 - C. Improve appetite
 - D. Increase contamination
185. Which evidence source has the highest risk of bias?
- A. Meta-analysis
 - B. RCT
 - C. Cohort study
 - D. Expert opinion
186. A research hypothesis is:
- A. Random opinion
 - B. A proposed explanation to be tested
 - C. Final diagnosis
 - D. Published guideline
187. Why is sampling important?
- A. Entire populations are difficult to study
 - B. Saves resources

- C. Makes studies feasible
 - D. All of the above
- 188. Which statement about causation is correct?**
- A. Association always proves causation
 - B. Causation implies direct effect
 - C. Causation and association are identical
 - D. Statistics are unnecessary
- 189. Which study design is best for rare diseases?**
- A. Cross-sectional
 - B. Case-control
 - C. Cohort only
 - D. Editorial
- 190. Hand hygiene after patient contact helps:**
- A. Spread infection
 - B. Reduce transmission risk
 - C. Replace PPE
 - D. Eliminate all bacteria forever
- 191. A good research question should be:**
- A. Broad and unclear
 - B. Specific and answerable
 - C. Impossible to study
 - D. Emotional
- 192. Which is a feature of qualitative research?**
- A. Numerical calculations only
 - B. Exploration of experiences
 - C. Randomization only
 - D. Laboratory-only methods
- 193. Internal validity focuses on:**
- A. Generalizability only
 - B. Accuracy within the study
 - C. Publication quality
 - D. Funding amount
- 194. Which type of evidence combines several studies statistically?**
- A. Editorial
 - B. Case report
 - C. Meta-analysis
 - D. Narrative review

195. **A confounding variable may:**
- A. Create false associations
 - B. Distort results
 - C. Affect interpretation
 - D. **All of the above**
196. **The main purpose of a control group is to:**
- A. Increase bias
 - B. **Allow comparison**
 - C. Eliminate ethics review
 - D. Reduce sample size
197. **Which is an example of evidence-based practice?**
- A. Using treatment based only on tradition
 - B. **Combining guidelines with patient preferences**
 - C. Ignoring research
 - D. Following social media advice
198. **Randomized controlled trials are valued because they:**
- A. Avoid comparison groups
 - B. **Provide strong evidence for treatment effectiveness**
 - C. Eliminate ethics
 - D. Ignore confounding
199. **The population in research refers to:**
- A. A sample only
 - B. **Entire group of interest**
 - C. One physician
 - D. One hospital room
200. **Which statement best describes scientific medicine?**
- A. Based only on authority
 - B. Based only on tradition
 - C. **Based on evidence, analysis, and critical thinking**
 - D. Based only on personal belief
201. **Which discipline belongs to the fundamental medical sciences?**
- A. Therapy
 - B. Surgery
 - C. **Pathological Physiology**
 - D. Anesthesiology
202. **The main task of clinical disciplines is:**
- A. Studying molecular mechanisms
 - B. Developing medical philosophy

- C. **Diagnosis and treatment of patients**
 - D. Studying cell structure
- 203. Which science studies the mechanisms of disease development?**
- A. Normal Anatomy
 - B. **Pathological Physiology**
 - C. Biophysics
 - D. Histology
- 204. What is the object of pharmacology study?**
- A. Infectious agents
 - B. **Drugs and their effects**
 - C. Mental processes
 - D. Organ anatomy
- 205. Which method is the main one in evidence-based medicine?**
- A. Intuitive
 - B. Experimental
 - C. **Randomized controlled trial**
 - D. Descriptive
- 206. Which discipline studies body tissues?**
- A. Embryology
 - B. **Histology**
 - C. Biochemistry
 - D. Immunology
- 207. Which of the following belongs to clinical disciplines?**
- A. Biochemistry
 - B. Physiology
 - C. **Cardiology**
 - D. Cytology
- 208. Which level of prevention is aimed at preventing disease occurrence?**
- A. Secondary
 - B. Tertiary
 - C. **Primary**
 - D. Rehabilitation
- 209. Who is considered the founder of the clinical method?**
- A. Galen
 - B. Avicenna
 - C. **Hippocrates**
 - D. Vesalius

210. **What does pathological anatomy study?**
A. Organ functions
B. Tissue changes in diseases
C. Genetic mutations
D. Medicines
211. **Which science studies human heredity?**
A. Biophysics
B. Genetics
C. Parasitology
D. Toxicology
212. **The main principle of medical ethics is:**
A. Confidentiality
B. Centralization
C. Standardization
D. Commercialization
213. **Which discipline is both fundamental and clinical?**
A. Anatomy
B. Microbiology
C. Pathological Anatomy
D. Biology
214. **What is studied by immunology?**
A. Hormones
B. Protective reactions of the body
C. Metabolism
D. Nervous system
215. **Which branch of medicine studies disease distribution?**
A. Epidemiology
B. Physiology
C. Urology
D. Radiology
216. **The main research method in anatomy is:**
A. Auscultation
B. Dissection
C. Palpation
D. Biopsy
217. **What does normal physiology study?**
A. Causes of diseases
B. Functions of a healthy organism

- C. Treatment of pathologies
 - D. Medicines
218. **One of the tasks of public health is:**
- A. Individual surgery
 - B. Mass disease prevention
 - C. Histological analysis
 - D. Biochemical diagnostics
219. **Which science studies microorganisms?**
- A. Virology
 - B. Microbiology
 - C. Biochemistry
 - D. Therapy
220. **What is the basis of clinical thinking of a doctor?**
- A. Randomness
 - B. Intuition
 - C. Analysis of symptoms and syndromes
 - D. Personal experience without evidence
221. **Which diagnostic method is instrumental?**
- A. Percussion
 - B. Inspection
 - C. ECG
 - D. History taking
222. **Which discipline studies the influence of environmental factors on health?**
- A. Hygiene
 - B. Morphology
 - C. Neurology
 - D. Endocrinology
223. **The main goal of rehabilitation is:**
- A. Diagnosis
 - B. Complete elimination of the pathogen
 - C. Restoration of body functions
 - D. Performing surgery
224. **Which science belongs to morphological sciences?**
- A. Physiology
 - B. Biochemistry
 - C. Anatomy
 - D. Pharmacology

225. Which science studies chemical processes in the body?
- A. Biochemistry
 - B. Pathophysiology
 - C. Immunology
 - D. Histology
226. What is studied in propedeutics of internal diseases?
- A. Surgical operations
 - B. Basics of diagnosing internal diseases
 - C. Forensic examination
 - D. Medicinal plants
227. Which belongs to physical examination methods?
- A. CT scan
 - B. MRI
 - C. Palpation
 - D. Biochemical blood test
228. Which discipline studies pharmaceutical forms and their preparation?
- A. Pharmacognosy
 - B. Pharmacy
 - C. Toxicology
 - D. Psychiatry
229. What is the main object of clinical medicine?
- A. Experimental animal
 - B. Cell
 - C. Sick person (patient)
 - D. Microorganism
230. Integration of fundamental and clinical sciences is necessary for:
- A. Simplifying terminology
 - B. Improving the quality of diagnosis and treatment
 - C. Eliminating research
 - D. Reducing prevention
231. Who is considered the "Father of Medicine"?
- A. Avicenna
 - B. Galen
 - C. Hippocrates
 - D. Paracelsus
232. Which work was written by Avicenna?
- A. "Corpus Hippocraticum"
 - B. "The Canon of Medicine"

- C. "On the Structure of the Human Body"
 - D. "Aphorisms"
233. **The main principle of medical deontology is:**
- A. Making profit
 - B. Observing professional duty
 - C. Developing technologies
 - D. Conducting experiments
234. **Who first described the circulation of blood?**
- A. Vesalius
 - B. Harvey
 - C. Hippocrates
 - D. Pirogov
235. **What does the term "deontology" mean?**
- A. The study of diseases
 - B. The study of moral duty
 - C. The study of medicines
 - D. The study of prevention
236. **Which principle of bioethics requires patient consent for treatment?**
- A. Justice
 - B. Autonomy
 - C. Beneficence
 - D. Confidentiality
237. **Who is considered the founder of scientific anatomy?**
- A. Avicenna
 - B. Vesalius
 - C. Galen
 - D. Pavlov
238. **Which physician developed the antiseptic method?**
- A. Lister
 - B. Koch
 - C. Mechnikov
 - D. Botkin
239. **The main moral principle of a doctor is:**
- A. "Do no harm"
 - B. "Keep distance"
 - C. "Treatment at any cost"
 - D. "Keep state secrets"

240. **What is the subject of medical ethics?**
A. Financial relations
B. Moral aspects of healthcare workers' activity
C. Structure of organs
D. Surgical methods
241. **Who discovered the causative agent of tuberculosis?**
A. Pasteur
B. Lister
C. Koch
D. Ehrlich
242. **Which scientist developed the theory of higher nervous activity?**
A. Sechenov
B. Pavlov
C. Mechnikov
D. Pirogov
243. **What does medical confidentiality mean?**
A. Hiding the diagnosis from the patient
B. Non-disclosure of patient information
C. Refusal to keep documentation
D. Secret treatment methods
244. **Who is the founder of military field surgery?**
A. Botkin
B. Pavlov
C. Pirogov
D. Sklifosovsky
245. **Which bioethical principle is connected with equal treatment of patients?**
A. Autonomy
B. Beneficence
C. Justice
D. Confidentiality
246. **Who developed the vaccination method against smallpox?**
A. Jenner
B. Pasteur
C. Koch
D. Mechnikov
247. **What is the system of moral standards for medical workers called?**
A. Biology
B. Deontology

- C. Physiology
 - D. Epidemiology
248. Which scientist discovered phagocytosis?
- A. Pavlov
 - B. Mechnikov
 - C. Pasteur
 - D. Koch
249. The main ethical document for physicians is:
- A. Constitution
 - B. Physician's oath
 - C. Criminal code
 - D. Employment contract
250. Who is considered the founder of microbiology?
- A. Koch
 - B. Pasteur
 - C. Harvey
 - D. Vesalius
251. Which principle requires doing good for the patient?
- A. Autonomy
 - B. Beneficence
 - C. Justice
 - D. Honesty
252. Who first used ether anesthesia?
- A. Morton
 - B. Pirogov
 - C. Lister
 - D. Botkin
253. What is considered a violation of medical deontology?
- A. Maintaining confidentiality
 - B. Rude attitude toward a patient
 - C. Professional development
 - D. Obtaining informed consent
254. Who created the first classification of temperaments?
- A. Pavlov
 - B. Hippocrates
 - C. Avicenna
 - D. Aristotle

255. **What is a mandatory condition for medical intervention?**
A. Permission from relatives
B. **Informed consent of the patient**
C. Permission from administration
D. Letter from the insurance company
256. **Which physician made a great contribution to the development of asepsis?**
A. Lister
B. **Semmelweis**
C. Pavlov
D. Koch
257. **What does the history of medicine study?**
A. Only modern treatment methods
B. **Development of medical knowledge and practice**
C. Exclusively surgical methods
D. Economics of healthcare
258. **What is the physician's duty to keep patient information secret called?**
A. Collegiality
B. Subordination
C. **Confidentiality**
D. Competence
259. **Who first scientifically substantiated the reflex activity of the brain?**
A. **Sechenov**
B. Pavlov
C. Botkin
D. Pirogov
260. **The main goal of medical ethics is:**
A. Financial control
B. **Protection of the moral values of medicine**
C. Development of technology
D. Hospital management
261. **The basis of effective communication between a doctor and a patient is:**
A. Authoritarianism
B. **Empathy and trust**
C. Strictness
D. Formality
262. **What does the term "empathy" mean?**
A. Indifference toward the patient
B. **The ability to understand the patient's feelings**

- C. Imposing one's opinion
 - D. Controlling the patient's behavior
263. Which type of communication is considered the most effective in medicine?
- A. Conflict-based
 - B. Passive
 - C. Partnership-based
 - D. Ignoring
264. The main goal of doctor-patient communication is:
- A. Collecting documents
 - B. Establishing trust and obtaining information
 - C. Prescribing expensive treatment
 - D. Reducing consultation time
265. What belongs to nonverbal communication?
- A. Medical documentation
 - B. Intonation and gestures
 - C. Prescription
 - D. Diagnosis
266. Which quality is especially important for a doctor when communicating with a seriously ill patient?
- A. Coldness
 - B. Patience
 - C. Harshness
 - D. Indifference
267. What can destroy a patient's trust in a doctor?
- A. Careful listening
 - B. Maintaining confidentiality
 - C. Rude attitude
 - D. Explaining the diagnosis
268. What is the ability of a doctor to attentively listen to a patient called?
- A. Reflection
 - B. Active listening
 - C. Manipulation
 - D. Subordination
269. Which communication style helps improve treatment adherence?
- A. Aggressive
 - B. Democratic
 - C. Ignoring
 - D. Directive without explanations

270. **What is a mandatory element of informed consent?**
- A. Pressure on the patient
 - B. Full explanation of the procedure
 - C. Hiding risks
 - D. Refusing to answer questions
271. **How should a doctor deliver bad news to a patient?**
- A. Quickly and without explanation
 - B. Tactfully and calmly
 - C. Through relatives without patient consent
 - D. In written form without discussion
272. **What contributes to effective communication?**
- A. Using complex terms without explanation
 - B. Maintaining eye contact
 - C. Ignoring patient emotions
 - D. Rushing
273. **What is a breakdown in communication between doctor and patient called?**
- A. Communication barrier
 - B. Subordination
 - C. Collegiality
 - D. Confidentiality
274. **Which doctor's behavior is unacceptable?**
- A. Respectful attitude
 - B. Irritability and rudeness
 - C. Empathy
 - D. Patience
275. **What is important to consider when communicating with a patient from another culture?**
- A. Only age
 - B. Cultural and religious characteristics
 - C. Doctor's social status
 - D. Doctor's nationality
276. **The main function of medical communication is:**
- A. Administrative control
 - B. Exchange of information and patient support
 - C. Imposing penalties
 - D. Financial reporting
277. **What does the principle of confidentiality mean?**
- A. Hiding medical errors

- B. Protecting patient information
 - C. Limiting treatment
 - D. Prohibiting communication with relatives
278. Which factor can improve mutual understanding between doctor and patient?
- A. Medical jargon
 - B. Clear explanation of the diagnosis
 - C. Ignoring patient questions
 - D. Formal communication
279. What belongs to professional medical communication?
- A. Mocking the patient
 - B. Ethical and respectful communication
 - C. Ignoring complaints
 - D. Conflict behavior
280. How should a doctor behave in a conflict situation?
- A. Raise their voice
 - B. Stay calm
 - C. Ignore the patient
 - D. Stop treatment immediately
281. What is an important part of communication with a child patient?
- A. Using frightening expressions
 - B. Friendly approach
 - C. Completely ignoring emotions
 - D. Talking only with parents
282. What helps reduce patient anxiety?
- A. Doctor's indifference
 - B. Support and clear explanations
 - C. Medical terms without clarification
 - D. Refusal to answer questions
283. What is the ability of a doctor to control their emotions called?
- A. Self-regulation
 - B. Conflict tendency
 - C. Manipulation
 - D. Authoritarianism
284. What is a sign of effective communication?
- A. Patient distrust
 - B. Mutual understanding
 - C. Conflict
 - D. Refusal of treatment

285. Which factor is most important for building patient trust?
- A. High cost of treatment
 - B. Competence and respect
 - C. Strict tone
 - D. Distance
286. What is unacceptable in professional communication?
- A. Tactfulness
 - B. Humiliating the patient
 - C. Confidentiality
 - D. Politeness
287. Which communication method helps a doctor better understand the patient?
- A. Interrupting
 - B. Active listening
 - C. Ignoring emotions
 - D. Formal questioning
288. What is important when explaining treatment to a patient?
- A. Using unclear terms
 - B. Giving clear and understandable information
 - C. Avoiding questions
 - D. Hiding side effects
289. Which ethical principle forms the basis of the doctor-patient relationship?
- A. Competition
 - B. Respect for the patient's personality
 - C. Patient submission
 - D. Financial benefit
290. The main goal of communication in medicine is:
- A. Controlling the patient
 - B. Increasing treatment effectiveness and trust
 - C. Increasing documentation
 - D. Reducing consultation time
291. What is a medical history?
- A. A financial document
 - B. A medical document about the patient's condition
 - C. A legal contract
 - D. A statistical report
292. Which section of the medical history is filled out first?
- A. Observation notes
 - B. Patient complaints

- C. Personal information section
 - D. Epicrisis
293. What is included in the personal information section?
- A. Test results
 - B. Diagnosis
 - C. Patient's personal data
 - D. Treatment plan
294. What belongs to subjective data?
- A. Body temperature
 - B. Blood pressure
 - C. Patient complaints
 - D. X-ray results
295. What does the history of the present illness include?
- A. Marital status
 - B. Development of the current disease
 - C. Laboratory data
 - D. Insurance policy
296. What does the term "past medical history" mean?
- A. History of the current disease
 - B. Patient's biography and past diseases
 - C. Treatment plan
 - D. Description of surgery
297. What is the objective examination of a patient called?
- A. Epicrisis
 - B. Status praesens
 - C. Anamnesis
 - D. Prognosis
298. What does the "complaints" section include?
- A. Ultrasound results
 - B. Information from the patient's words
 - C. Doctor's prescriptions
 - D. Laboratory data
299. Which section contains the preliminary diagnosis?
- A. Personal information section
 - B. Observation notes
 - C. Justification of diagnosis
 - D. Epicrisis

- 300. What do observation notes reflect?**
- A. Financial expenses
 - B. Dynamics of the patient's condition
 - C. Doctor's biography
 - D. Personal data
- 301. What is an epicrisis?**
- A. Patient complaints
 - B. A brief summary of the disease course and treatment
 - C. Test results
 - D. Examination plan
- 302. Which type of epicrisis is prepared when a patient is discharged?**
- A. Preliminary
 - B. Discharge
 - C. Postmortem
 - D. Stage
- 303. What belongs to objective data?**
- A. Pain described by the patient
 - B. Complaints
 - C. Examination and laboratory results
 - D. Patient's mood
- 304. What is the main purpose of maintaining a medical history?**
- A. Archiving documents
 - B. Systematizing patient data
 - C. Financial reporting
 - D. Controlling relatives
- 305. What does the examination plan include?**
- A. Only diagnosis
 - B. Methods of further diagnostics
 - C. Personal information
 - D. Patient biography
- 306. Where are the doctor's prescriptions recorded?**
- A. In the epicrisis
 - B. In the prescription sheet
 - C. In the past medical history
 - D. In the personal information section
- 307. What is the legal significance of a medical history?**
- A. A document for the insurance company
 - B. Official confirmation of medical care provided

- C. Doctor's personal diary
 - D. Scientific article
- 308. What does family history include?**
- A. Working conditions
 - B. Hereditary and family diseases
 - C. Patient's diet
 - D. Personal data
- 309. What is indicated in the clinical diagnosis?**
- A. Only symptoms
 - B. Main disease and complications
 - C. Only laboratory data
 - D. Financial expenses
- 310. What is the doctor's daily record of the patient's condition called?**
- A. Epicrisis
 - B. Medical council
 - C. Observation notes
 - D. Past medical history
- 311. What does the objective examination section include?**
- A. Complaints
 - B. Examination of organs and systems
 - C. Patient biography
 - D. Treatment plan
- 312. Which section of the medical history contains discharge recommendations?**
- A. Anamnesis
 - B. Epicrisis
 - C. Complaints
 - D. Personal information section
- 313. What is important when filling out a medical history?**
- A. Using colloquial expressions
 - B. Accuracy and consistency of data
 - C. Hiding information
 - D. Brevity without details
- 314. What belongs to additional examination methods?**
- A. Inspection
 - B. Palpation
 - C. Laboratory tests
 - D. Collecting complaints

315. **What does occupational history include?**
A. Heredity
B. Working conditions and occupational hazards
C. Diet
D. Personal data
316. **What is the conclusion about the patient's condition at a certain stage of treatment called?**
A. Discharge
B. Stage epicrisis
C. Anamnesis
D. Consultation
317. **What does the "status localis" section reflect?**
A. General condition of the patient
B. Local manifestations of the disease
C. Family history
D. Treatment plan
318. **What is mandatory in a medical history?**
A. Doctor's signature
B. Patient's photograph
C. Insurance policy number
D. Relatives' data
319. **What is an important requirement for a medical history?**
A. Emotional description
B. Confidentiality of information
C. Free-form writing
D. Using abbreviations without rules
320. **The main function of a medical history is:**
A. Financial control
B. Documentation of diagnosis, treatment, and observation
C. Archiving statistics
D. Advertising a medical institution
321. **What is the first stage of the objective examination of a patient?**
A. Percussion
B. Auscultation
C. Inspection
D. Palpation
322. **What is the method of examination by touching called?**
A. Auscultation

- B. Percussion
 - C. **Palpation**
 - D. Inspection
323. **The main purpose of a general patient examination is:**
- A. Determining laboratory parameters
 - B. **Assessing the patient's general condition**
 - C. Prescribing treatment
 - D. Performing surgery
324. **What is assessed during a general examination?**
- A. Only temperature
 - B. **Consciousness, posture, body build, skin**
 - C. Only breathing
 - D. Only pulse
325. **What is the method of examination by listening to sounds called?**
- A. Palpation
 - B. Percussion
 - C. Inspection
 - D. **Auscultation**
326. **What is studied using percussion?**
- A. Body temperature
 - B. **Sound phenomena produced by tapping**
 - C. Electrical activity of the heart
 - D. Chemical composition of blood
327. **Which instrument is used for auscultation?**
- A. Tonometer
 - B. Thermometer
 - C. **Stethoscope**
 - D. Percussion hammer
328. **What is determined during palpation?**
- A. **Size, tenderness, and consistency of organs**
 - B. Only temperature
 - C. Only blood pressure
 - D. Blood test results
329. **Which percussion sound is normal for the lungs?**
- A. Dull
 - B. Box sound
 - C. Tympanic
 - D. **Clear pulmonary sound**

330. What does the term "auscultation" mean?
- A. Inspection
 - B. Listening to internal body sounds
 - C. Palpating organs
 - D. Measuring blood pressure
331. Which patient position is considered active?
- A. The patient cannot move
 - B. The patient independently takes a comfortable position
 - C. Forced position
 - D. Loss of consciousness
332. What is assessed during skin inspection?
- A. Color, moisture, rashes
 - B. Only temperature
 - C. Only elasticity
 - D. Only sensitivity
333. Which type of percussion is used to determine organ borders?
- A. Comparative
 - B. Topographic
 - C. Superficial
 - D. Deep
334. Which method helps detect abdominal tenderness?
- A. Inspection
 - B. Palpation
 - C. Auscultation
 - D. Percussion
335. What can be determined during heart auscultation?
- A. Liver size
 - B. Heart sounds and murmurs
 - C. Skin color
 - D. Muscle strength
336. Which percussion sound is characteristic of dense organs?
- A. Clear
 - B. Dull
 - C. Tympanic
 - D. Metallic
337. What belongs to superficial palpation?
- A. Examination of deep organs
 - B. Light touching of the skin and muscles

- C. Listening to murmurs
 - D. Tapping the chest
- 338. What is the comparison of sounds in symmetrical areas of the chest called?**
- A. Topographic percussion
 - B. **Comparative percussion**
 - C. Deep palpation
 - D. Bimanual palpation
- 339. What can be detected during lung auscultation?**
- A. **Rales and respiratory sounds**
 - B. Heart size
 - C. Blood pressure
 - D. Pulse
- 340. What is assessed during examination of the patient's face?**
- A. Only the shape of the nose
 - B. **Facial expression and skin condition**
 - C. Only the eyes
 - D. Only the lips
- 341. Which type of palpation is used to examine internal organs?**
- A. Superficial
 - B. **Deep**
 - C. Local
 - D. Visual
- 342. What does a tympanic sound during percussion indicate?**
- A. **Presence of air in a hollow organ**
 - B. Tissue consolidation
 - C. Fluid in an organ
 - D. Absence of pathology
- 343. What is necessary for proper auscultation?**
- A. A noisy room
 - B. **Silence and proper patient positioning**
 - C. Bright light
 - D. High air temperature
- 344. Which examination method is the oldest?**
- A. Radiography
 - B. **Inspection**
 - C. ECG
 - D. Ultrasound

345. **What is determined during heart percussion?**
A. Heart borders
B. Blood pressure
C. Heart rhythm
D. Pulse
346. **What belongs to physical examination methods?**
A. CT scan
B. MRI
C. Inspection, palpation, percussion, auscultation
D. Biochemical blood test
347. **Which symptom can be identified during palpation of lymph nodes?**
A. CT scan
B. Tenderness and enlargement
C. Biochemical blood test
D. None
348. **What is examined during intestinal auscultation?**
A. Peristaltic sounds
B. Liver size
C. Fever
D. Tachycardia
349. **Which method helps determine the presence of fluid in the pleural cavity?**
A. Auscultation
B. Percussion
C. Inspection
D. Palpation
350. **The main goal of physical examination is:**
A. Replacing laboratory tests
B. Obtaining objective data about the patient's condition
C. CT scan
D. MRI
351. **The term hepatomegaly means:**
A. Inflammation of the liver
B. Enlargement of the liver
C. Normal size
D. None of the above
352. **The suffix -itis means:**
A. Tumor
B. Pain

- C. Inflammation
 - D. Incision
353. The prefix tachy- means:
- A. Slow
 - B. Fast
 - C. Normal
 - D. Irregular
354. The term bradycardia means:
- A. Rapid heartbeat
 - B. Irregular rhythm
 - C. Slow heartbeat
 - D. Cardiac arrest
355. Dyspnea is:
- A. Absence of breathing
 - B. Difficult breathing
 - C. Shallow breathing
 - D. Normal breathing
356. What does nephrectomy mean?
- A. Examination of the kidney
 - B. Removal of the kidney
 - C. Inflammation of the kidney
 - D. Kidney tumor
357. The suffix -algia means:
- A. Pain
 - B. Inflammation
 - C. Tumor
 - D. Incision
358. Leukocytosis means:
- A. Decrease in leukocytes
 - B. Increase in leukocytes
 - C. Normal levels
 - D. None of the above

- A. Inflammation of the appendix
- B. Removal of the appendix
- C. Rupture
- D. None

365. What does anuria mean?

- A. Pus in urine
- B. Protein in urine
- C. Absence of urine
- D. Glucose in urine

366. myocarditis means:

- A. Heart tumor
- B. Myocardial infarction
- C. Inflammation of the myocardium
- D. None

367. The prefix hyper- means:

- A. Decrease
- B. Excessive / Increased

- C. Absence
- D. Slowing

368. Arthralgia means:

- A. Joint inflammation
- B. Joint destruction
- C. Joint pain
- D. Joint tumor

369. The suffix -lysis means:

- A. Examination
- B. Destruction
- C. Suturing
- D. Inflammation

370. Hemiplegia is:

- A. Paralysis of one side of the body
- B. Paralysis of the legs
- C. Convulsions
- D. Loss of sensation

371. Clavicle is:

- A. Scapula
- B. Collarbone
- C. Sternum
- D. Humerus

372. Scapula means:

- A. Pelvis
- B. Femur
- C. Shoulder blade
- D. Rib

373. Femur is:

- A. Thigh bone
- B. Ulna
- C. Radius
- D. Fibula

374. Patella means:

- A. Shoulder
- B. Foot
- C. Kneecap
- D. Hand

- 375. Mandible is:**
A. Upper jaw
B. Lower jaw
C. Zygomatic bone
D. Nasal bone
- 376. Thorax means:**
A. Abdomen
B. Pelvis
C. Chest
D. Skull
